

With 140 years experience in fluid handling, Heap & Partners offer a range of engineering solutions to help you gain that competitive edge.

Covering everything from training your existing workforce, right up to the design, installation and commissioning of complete systems. Our range of services includes;

Training

We offer a comprehensive range of training programmes from basic valve maintenance to advanced control valve sizing.

Control Panels

We design and build a variety of panels from simple pneumatic, hydraulic and electrical panels for ESD control to complete PLC controlled panels.

Systems

From simple PID dosing systems to full pump pressure control systems.

Consultancy

We offer impartial advice and designs for simple valve package selections based on specific duties, system control schemes and complete system designs.

Site Support

Having worked on site all over the world, our experienced engineers are available to assist with the installation and commissioning of fluid systems, no matter where.

Testing & Development

Our Research & Development department provides bespoke solutions for improving existing products or systems or to develop and test new systems or valve packages.
