

Heap & Partners are not just a distributor for some of the very best flow control products available in the UK, we also provide a range of specialised services and bespoke solutions for flow related issues all over the world, including;

Stock Management

We provide an on-site stock management service tailored to meet individual customer requirements. Utilising some of the best forecasting software available and analysing customers annual usage, we can provide recommendations and streamline stock profiles to ensure their stock levels are effectively and correctly managed. By reducing dead stock and ensuring the correct levels of healthy stock, a client can significantly improve the efficiency of their plant

Control Panels

We offer a design and build service for a range of bespoke electric, hydraulic and pneumatic control panels. The panels can be made to customers specifications or using our in-house designs. On-site installation is also available, if required. All our instrumentation panels are designed and manufactured in accordance with ISO 9001:2000.

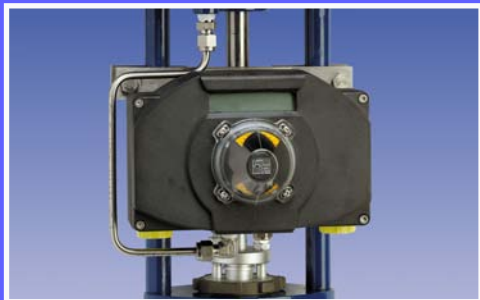

Clean Build

Our clean build and test facilities enable us to offer a range of 'clean built' valves suitable for specialist processes including Hydrogen Peroxide, Chlorine, Fluorine and Oxygen service. The valves are cleaned in accordance with a predetermined production procedure to meet customers' requirements.

Project Management

When a client sanctions a new build, we can coordinate all valve purchases for the entire project. All of the required equipment is held in a specific quarantined area of our stores, ready for call-off to site. This provides a number of advantages to our client. Stock losses are dramatically reduced, a single point of contact for expediting is provided, the client can take advantage of our purchasing power, whilst equipment is available with all relevant documentation for rapid call off, all for a pre-agreed fixed fee.

Design & Manufacturing

Having our own design and R&D departments, enables us to offer design and consultancy services, providing bespoke solutions to your problems. Backed up by our extensive in-house manufacturing capabilities, we can also provide a range of ancillary equipment including, extended spindles, valve safety interlocking, actuated valve packages and special paint finishes.
